

## **A paper whose operators the conversion destroyed**

Reaction times differed between the groups,  $t(23) = 2.45$ ,  $p = .022$ .

The effect of condition was reliable,  $F(2, 30) = 5.10$ ,  $p = .012$ .

Accuracy differed between conditions,  $F(1, 118) = 9.20$ ,  $p = .003$ .

Recall was lower under pressure,  $t(46) = 1.80$ ,  $p = .04$ .

Effort was higher in the noticing group,  $t(19) = 4.15$ ,  $p = .001$ .
